

FAMILY-ASSISTED TELEMEDICINE FOR REMOTE ELDERLY CARE

CONTINUOUS HEALTH RECORDS

FAMILY-LED CARE

WHATSAPP-BASED ACCESS

Bringing doctors, elderly patients, and families together—no matter the distance.

THE CHALLENGE

ELDERLY HEALTHCARE ACCESS IS BROKEN IN REMOTE REGIONS

CURRENT BARRIERS

- Limited access to qualified doctors in rural areas
- Long travel distances to hospitals
- Poor medical infrastructure and facilities
- High cost and physical strain of travel
- Younger family members migrate to cities
- Elderly often left to manage health alone

DEVASTATING RESULTS

When elderly patients lack proper access to healthcare, the consequences cascade quickly. Delayed diagnoses lead to worsening chronic conditions. Without family support or proper medical guidance, many become dependent on unlicensed practitioners or pharmacy staff—risking dangerous misdiagnosis and inappropriate treatment.

WHY EXISTING TELEMEDICINE FAILS THE ELDERLY

FAULTY ASSUMPTIONS

Most telemedicine platforms assume smartphone literacy, willingness to download apps, create logins, and self-manage appointments. These assumptions exclude the very populations who need care most.

ELDERLY STRUGGLES

Complex interfaces, English-only apps, and technology anxiety create insurmountable barriers. Many elderly patients abandon digital health tools after a single frustrating experience.

FRAGMENTED CARE

Family members are often excluded from consultations, leading to miscommunication, missed instructions, and poor treatment adherence. Healthcare becomes fragmented and ineffective.

♥ OUR SOLUTION

A FAMILY-ASSISTED TELEMEDICINE PLATFORM

A mobile-first healthcare platform where family members manage care coordination, and elderly patients join consultations effortlessly through familiar technology.

FAMILY BOOKS

Son or daughter schedules the appointment on behalf of their parent

WHATSAPP LINK

Video consultation link sent directly to patient via WhatsApp

ONE-TAP JOIN

Elderly users join with a single tap—no app learning required

CONNECTED CARE

Family, patient, and doctor join the same consultation together

HOW IT WORKS

BOOK APPOINTMENT

Family member schedules a consultation through the platform

1

2

DOCTOR CONFIRMS

Verified doctor reviews request and confirms availability

LINK SENT

Secure video link sent to patient via WhatsApp—no downloads needed

3

4

ONE-TAP JOIN

Patient joins with a single tap whilst family member joins remotely

FULL CONSULTATION

Doctor reviews complete medical history and conducts examination

5

6

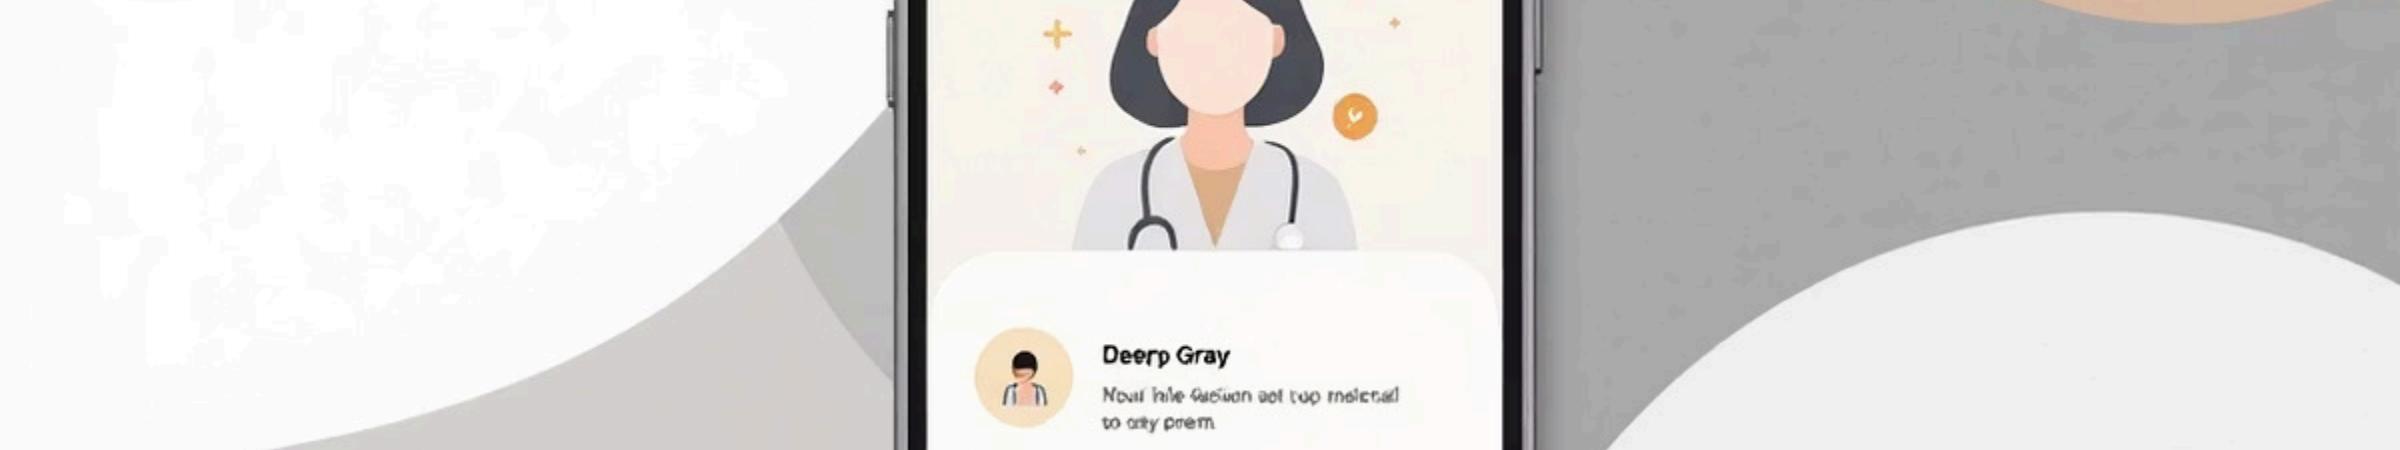

DIGITAL RECORDS

Diagnosis, prescription, and consultation notes shared digitally

FOLLOW-UP

Automated reminders sent to family for medication and next appointment

7

 PLATFORM FEATURES

CORE FEATURES

FAMILY-MANAGED BOOKING

Caregivers schedule and coordinate all appointments on behalf of elderly patients, removing technology barriers entirely.

WHATSAPP INTEGRATION

Video consultation links delivered through WhatsApp—a familiar platform that requires no new learning or app downloads.

MULTI-PARTY CALLS

Doctor, patient, and family join the same consultation. Low-bandwidth optimisation ensures connectivity even in rural areas.

DIGITAL HEALTH PROFILE

Secure storage of prescriptions, medical reports, consultation notes, and longitudinal health history for continuity of care.

KEY USER ROLES

PATIENT

Joins consultations via WhatsApp link. Receives prescriptions and care instructions. No app complexity or navigation required.

CAREGIVER

Books appointments and joins consultations remotely. Explains symptoms and history. Receives alerts, reminders, and updates to manage ongoing care.

DOCTOR

Conducts video consultations and reviews complete patient history. Adds notes, prescriptions, and follow-ups. Works flexibly from any location.

ADMINISTRATOR

Verifies doctors and manages users. Ensures data security, quality, and compliance. Monitors platform performance and user satisfaction.

VALUE DELIVERED TO EACH STAKEHOLDER

ELDERLY PATIENTS

- No smartphone learning required
- Familiar WhatsApp experience
- Access healthcare from home
- Reduced travel, cost, and stress
- Better continuity of care
- Reduced isolation through family involvement

FAMILY CAREGIVERS

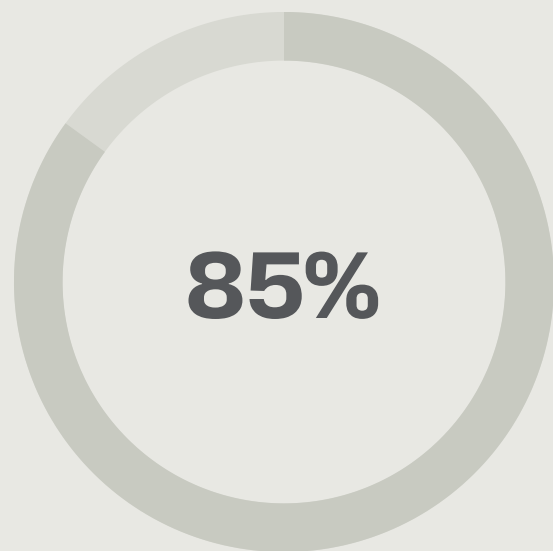

- Full control over appointment scheduling
- Ability to support parents remotely
- Clear understanding of diagnosis and treatment
- Peace of mind despite distance
- Better coordination with doctors

HEALTHCARE PROVIDERS

- Flexible working hours
- Location-independent practice
- Access to complete patient history
- Improved clinical decisions
- Serve underserved populations
- Additional income stream

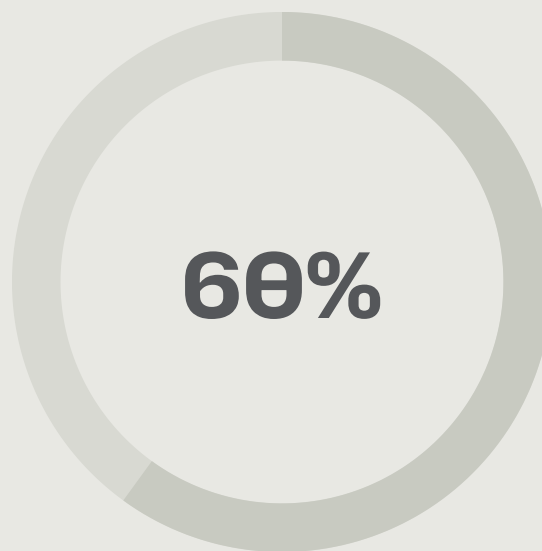

IMPACT & OUTCOMES

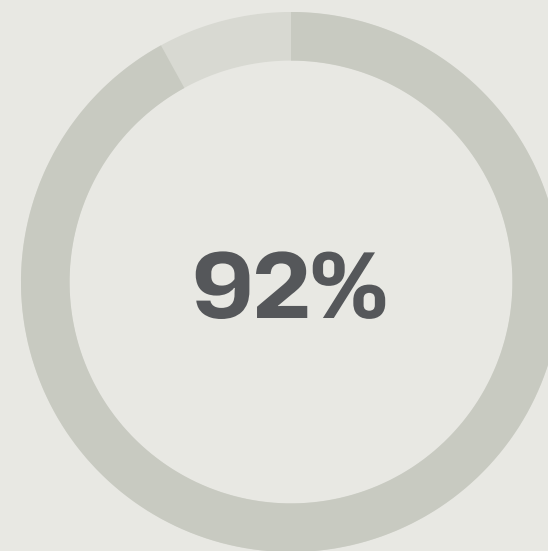

CONSULTATION COMPLETION

Higher completion rates compared to traditional
telemedicine

COST REDUCTION

Lower long-term healthcare costs through early
intervention

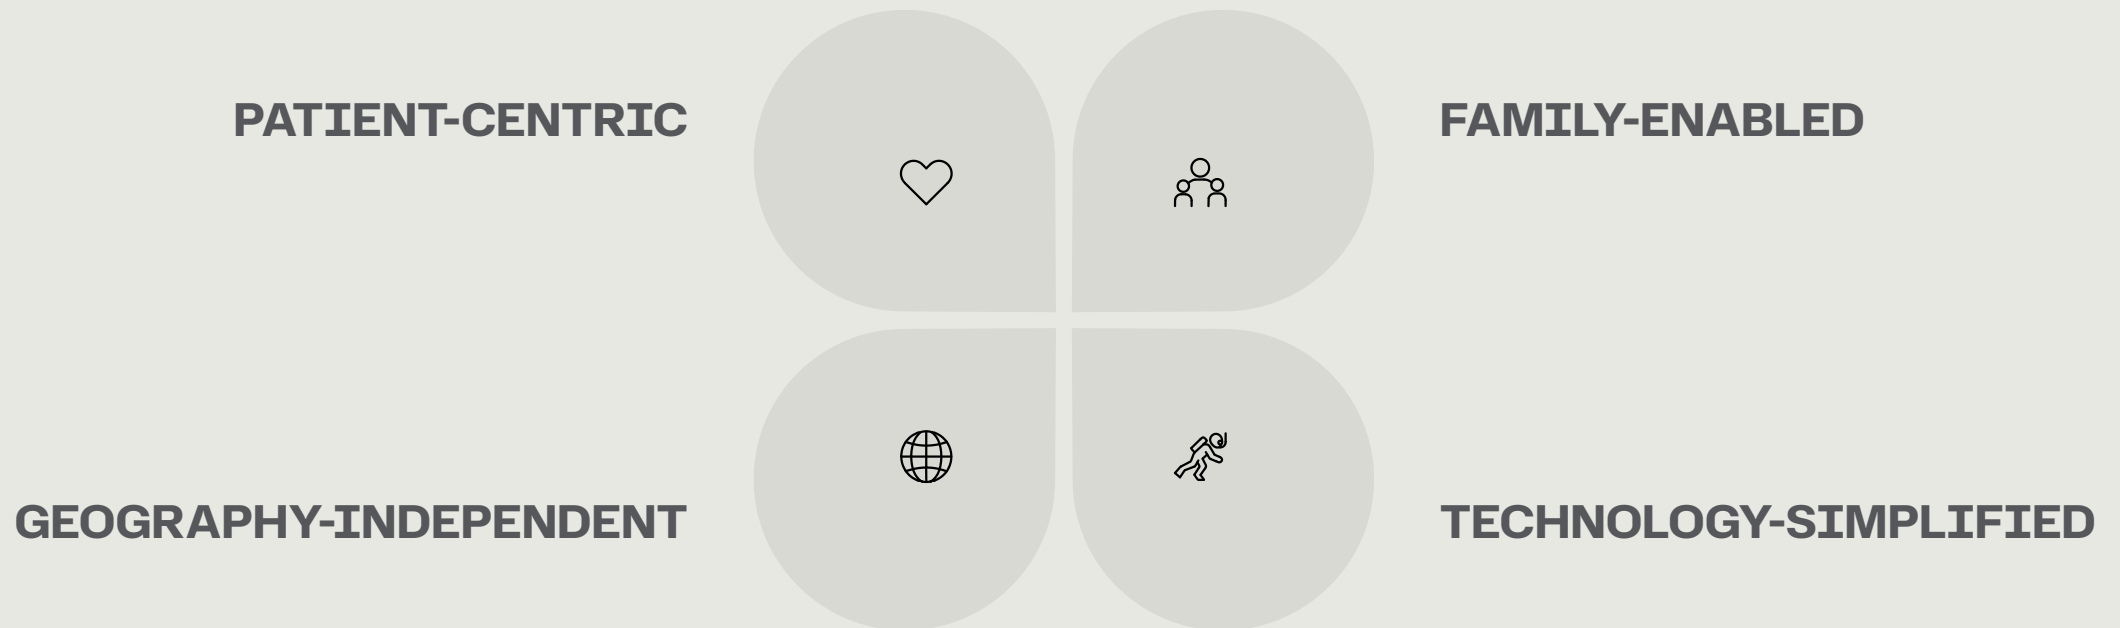

FAMILY SATISFACTION

Caregivers report improved peace of mind and
care coordination

Our platform enables timely and consistent medical care, improving diagnostic accuracy whilst reducing reliance on unsafe healthcare providers. Early detection and intervention, combined with strong emotional and family support systems, transform health outcomes for elderly populations in remote regions.

REDEFINING ELDERLY HEALTHCARE

Our mission: To ensure every elderly individual receives continuous, compassionate, and accessible healthcare—regardless of location.
